### **PASTURE WEED MANAGEMENT WEBINAR SCHEDULED FOR MARCH 9, 2021**

Pasture is the most economical forage source for most ruminant livestock species. Poor grazing practices, fertility management, and weed problems all cut into pasture productivity and potential profits.

Managing weeds in pastures is more than mowing and applying herbicide. Join us to find out what you can do to reduce the need for mowing and spraying. Dr. Mark Renz, UW Madison Extension Weed Specialist, will discuss Pasture Weed Management to reduce weed problems, improve pasture productivity and reduce the need for mowing and spraying weeds. This session will cover common pasture weed issues in Wisconsin and how to plan to tackle them in 2021. The webinar is scheduled for 7 – 8:30 p.m. CT.

There is no charge to participate in the sessions, but pre-registration is required to allow access to the session. Sign up at the Farm Ready Research webinar website, [go.wisc.edu/farmreadyresearch](http://go.wisc.edu/farmreadyresearch), and while you are there check out the other upcoming farming related topics.
